-  Rare – Once Every 1-5 Years
-  Very Rare – Once Every 5-10 Years

*Threat levels are based on FEMA Region 6 criteria. State or local threat level criteria may differ.

Hazardous Weather

Day 2-3 Weather Hazards

Valid: 0800 Sun - 0800 Tue

Hazardous Weather

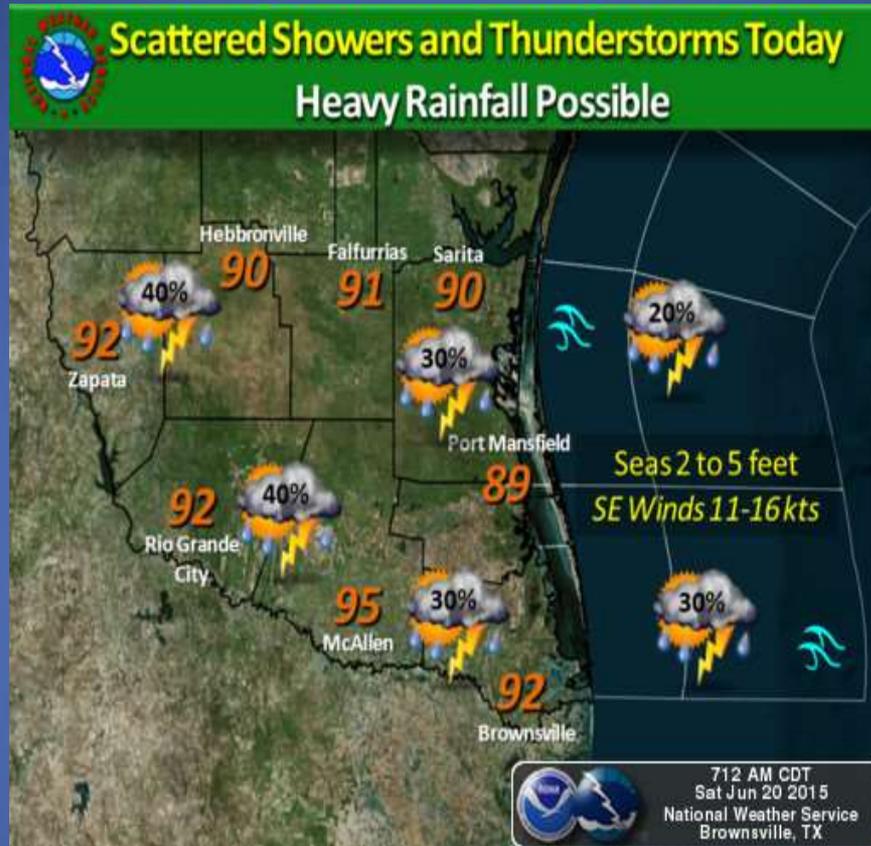

Mostly cloudy skies with isolated to scattered showers and thunderstorms can be expected across South Texas today. A few storms may be strong with gusty winds and heavy rainfall. A few locations may experience localized flooding due to already saturated soils. Highs will range from the mid 90s across the Rio Grande Plains to the upper 80s closer to the coast. A weak to moderate Southeast wind can be expected this afternoon.

Today will be seasonably hot and humid across North Texas. Afternoon high temperatures will be generally in the lower 90s under a partly to mostly sunny sky. A south wind will prevail at speeds between 10 and 20 mph. A few afternoon showers and thunderstorms will be possible generally south of a line from Lampasas to Waco to Palestine.

Hazardous Weather

The weekend starts off with a hot and humid day across the Rio Grande Valley and Deep South Texas. Another round of showers and thunderstorms are expected to develop along the sea breeze once again today. Flash flooding will be possible where training of storms occurs and heavy rains persist, especially over areas that have received rainfall in the last few days. Temperatures will push into the upper 80s along the coast and into the lower 90s inland. Stronger south to southeast winds can be expected today, with breezy conditions developing.
